Topic	DA Sharing platform review-2	⋮

New

Abstract

There hasn't been a legitimate platform for exchanging assignments on the market.The two main competitors are Chegg and Coursehero, however they are paid services. Students need a sharing forum that is driven by the community. Students can log in to our website's DA sharing platform using their student IDs to access and upload assignments. It is necessary that only digitally typed assignments be uploaded in order to make it more accessible. Assignment duplication is avoided to preserve objectivity.

Objectives

1. To use cloud services apart from storage in a real-world application which requires wide range of computational methods and models.

Technologies

1. AWS S3 for storage
2. React for front-end part
3. Node.js for backend.
4. Hosting on AWS.

Novelty

1. There are lot of assignment sharing platform existing in the market, but they are either paid or provide unreliable services.
2. Our app is both free to users exclusively available for college and school students and is authetic compared to other players in the market.
